

EZ-PLANT SOFTWARE PLANT DATABASE FOR VERSION 5.2

	NATIVE PLANT LEGEND	AND REGION
Eastern North America	n	Notes to all users: 1. Find the colored Region (R) column which relates to the Native Plant Legend shown to the left. The characters and/or letters that are displayed in the right side of the Remarks1 column also describes the region of the native plant location but a specific area. These native plants are not all inclusive and is a starter list. We have added cultivars or breeding of Native plants into our natives list and should be identified as 'selections' of natives. However not all cultivars may be actual natives of the region as shown. Cultivars of natives should be evaluated by the user more closely by questioning the extension agent in the location of the plant use. We have made our best attempt at identifying natives through various sources. The letters and characters display an area within the region where the plant is a native. A native may be in several areas but we attempted to regionalize by listing certain states that a plant could be native to. The color codes are to be used to quickly identify a native plant. A native plant may have several colors however we could only show one color, with additional code designations in the Remarks 1 column to help further identify the native plant region. Please verify plant zones. 2. The(E) East of the Miss. River region and the (n) Eastern North America are basically the same areas just different lists. 3. To quickly search for a plant just click Control F , and a Find Box will appear. Just type the plant name or a portion of the plant name or Key Name and click "Find All" and the page will scroll to that plant. 4. We have recently updated most of the plants shown below that were part of our original Database made in 2000-2002. Use the Legend Key Abbreviations shown in the second remarks column to identify nursery locations of where the plant may be purchased. The key abbreviation and prices were placed in this database in December of 2006 and 2007. You may want to verify the sizes and prices with the nursery. Also, if there is no key name shown then the plant was not listed in the catalogs used in any of the nurseries. We opted to keep these plants in the data base and let the nurseries we reviewed. We strongly encourage all users to edit the database and utilize the nursery plants and prices of your choice. If you need plant information like a plant spread that we have not listed, please inform us. Zone ranges vary with each plant. The N, S, & B are meant to be used as a GUIDE only as a general plant zone range.
